POWER-AWARE OPERATING SYSTEMS FOR INTERACTIVE SYSTEMS

A DISSERTATION
SUBMITTED TO THE DEPARTMENT OF ELECTRICAL ENGINEERING
AND THE COMMITTEE ON GRADUATE STUDIES
OF STANFORD UNIVERSITY
IN PARTIAL FULFILLMENT OF THE REQUIREMENTS
FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY

Yung-Hsiang Lu
December 2001

I certify that I have read this dissertation and that, in my opinion, it is fully adequate in scope and quality as a dissertation for the degree of Doctor of Philosophy.

Giovanni De Micheli
(Principal Adviser)

I certify that I have read this dissertation and that, in my opinion, it is fully adequate in scope and quality as a dissertation for the degree of Doctor of Philosophy.

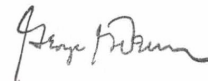

Dawson-Engler

I certify that I have read this dissertation and that, in my opinion, it is fully adequate in scope and quality as a dissertation for the degree of Doctor of Philosophy.

Teresa Meng

xviii ■ Foreword

The search for bettering energy efficiency would not be possible without realistic drivers and a world-wide participation of researchers. This is why the low-power computer vision challenge has been, and currently is, an important instrument for advancing the state of the art. The challenge was taken by some of the best groups in the world, and their effort has tackled the problem with different means and perspectives. Overall, this challenge has brought us very important results, that are fully documented in this book, and that will provide a strong impact on industry and academia.
