  - *Errata:* The third sentence in the proof.
  - *Corrige:* Hence the maximally reduced cube is: $\widetilde{\alpha} = supercube(\alpha \cap Q') = (\alpha \cap (supercube(\alpha \cap Q'))_{\alpha}) \cup (\alpha' \cap (supercube(\alpha \cap Q'))_{\alpha'}) = \alpha \cap (supercube(\alpha \cap Q'))_{\alpha}$ because $(\alpha \cap Q') \subseteq \alpha$. Since the supercube and the cofactor operators commute [4], then $\widetilde{\alpha} = \alpha \cap supercube(Q'_{\alpha})$.
